	571	Rubidoux Grapefruit Hybrid	LREC

® Varieties resulting from mutation breeding are sometimes be less stable than those developed with other methods. Nurseries are advised to evaluate bud source trees carefully, and growers should review information on stability of the variety to assess risk. In particular, 'DaisySL' (VI 763), is now known to produce some fruit with many seeds.

** UC License Required to Purchase this variety

WAIVER AND RELEASE FORM FOR THE RELEASE OF CITRUS PLANT MATERIALS FROM THE CCPP "EARLY RELEASE" PROGRAM

This AGREEMENT is made this _____ day of _____ 2012, by and between

_____ (hereinafter called "propagator") and the Regents of the University of California ("University") on behalf of the Citrus Clonal Protection Program ("CCPP").

WHEREAS, propagator desires to obtain the release of virus-tested citrus material that will qualify trees for California State Registration and Certification programs and/or satisfy United States quarantine regulations of the following indicated cultivar(s):

NOW, THEREFORE the propagator agrees to hold harmless, release, and forever discharge the Regents of the University of California, its agents, and employees from and waive any and all responsibility of same for any and all liability, claims, demands, actions, loss, and damage of any kind whatsoever sustained by reason of:

- A. defects which develop and/or are discovered after the subject plant material(s) have matured;
- B. latent defects or diseases in the plant material(s);
- C. genetic or other defect which develops and/or manifests itself after wood of the selection is sold to the propagator;
- D. genetic or other defect which develops and/or manifests itself in the progeny of the subject plant material(s).

By submitting this form you are accepting the terms and conditions of the above agreement.
